

KONICA MINOLTA

bizCloud FileBox

Simple & Secure Access to your Data from Anywhere

Working from home has become so common, but enterprises would probably face the following challenges when dealing with remote file access and sharing:

Unable to access company files via mobile device

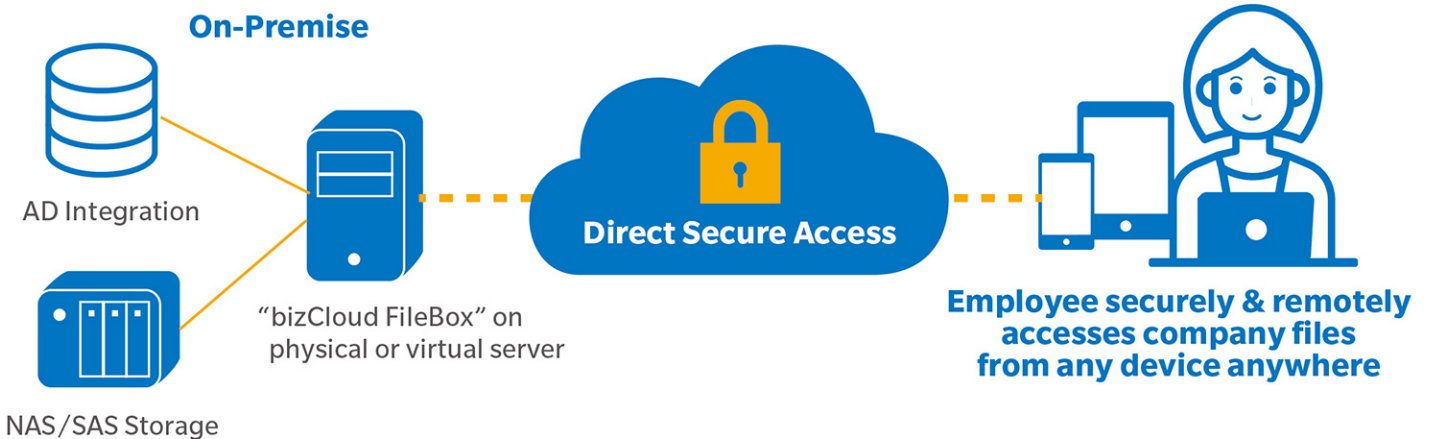

Not secure & not compliance via public cloud

Lack of IT professionals to setup remote access

How to make remote file access simpler?

Konica Minolta's bizCloud FileBox is a software that enables employees to securely access and share files on their company server with a PC, smartphone and tablet. It only requires either a physical or virtual server running on Window/ Linux platform.

End-to-end data protection with encryption for both data in-transit and at-rest

Security Feature Highlights

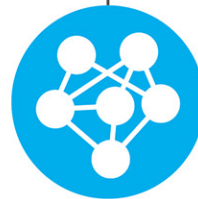

GDPR Compliance

Two-Factor Authentication

Anti-virus scanning

AD/LDAP Integration

All data stays on-premises, not on the cloud

Low cost with flexible subscription based model

No change in existing IT infrastructure

Regulatory Compliance

100% protection of your data assets

Remote installation & instant deployment

Access from any device anywhere

Handled by Konica Minolta's one-stop professional service & support
